Application to Class II Permissive Change

This request is to add a new product version to the FCC ID: **2AT4E-ICCPDG2HIGH**. The difference between the new product version and the already certified version is described below.

- The same communication unit with the same WLAN chip is used,
- The already certified product version was used as a mobile/portable charger,
- The same communication unit is now integrated into a fixed installation version
- The new product version can take a higher current of up to 80A, formerly 40A,
- Certification tests according to UL2594, UL2231, UL916, were carried out and passed with certificates for the new unit from an accredited testing laboratory,
- The WLAN functionality and safety, EMC were also tested by an accredited test laboratory according to FCC §15. All tests were passed and the final test reports are now available

Thank you for your attention in this matter.

Yours Sincerely,

Jochen Paukert
