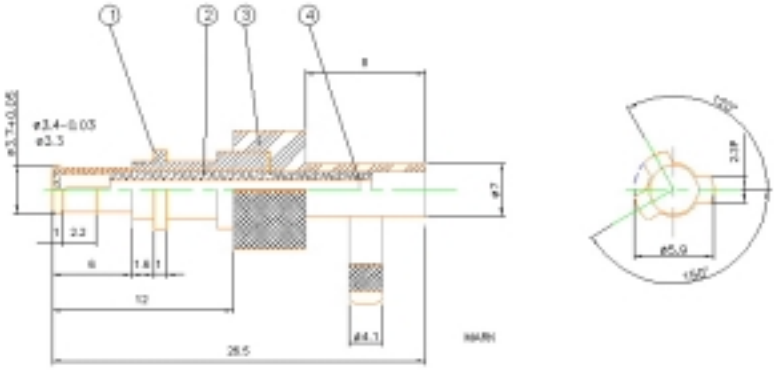
Re: Issue of unique connector for LKT-SUR-24

All indoor mounted antennas for use on the BreezeAccess model SU-R for 2.4 GHz utilize a unique connector known as an OCX. This connector is integrated into the OMNI-3 antenna and crimped to the cable of the UNI-7 or UNI-8 (aka –A7 model) antenna. The illustration below is a drawing of this crimp on OCX connector. With this connector the FCC rule 15.203 is met and professional installation of these antennas will not be required.



OCX 90 degree crimp connector
