1 PCB integrated Loop UHF Antenna Description

The following pictures show the PCB integrated loop UHF antenna of the FS197R devices which is routed partially on the top layer and the inner layers #1 and #2 of the PCB visualised as blue line in the PCB layout pictures below:

1.1 UHF Antenna Electrical Specification

No	Item	Spec.
1	VSWR	Max 2.0 : 1
2	Polarization	Linear
3	Impedance [Ω]	Nominal 50

Maximal antenna gain is approx. -23 dBi

Average antenna gain is approx. -23.6 dBi

2 PCB integrated Monopole UWB Antenna Description

The following pictures show the PCB integrated monopole UWB antenna of the FS197R devices which is realized as an PCB integrated monopole antenna routed partially on the top layer (left side picture) and on the bottom layer (right side picture) of the PCB (indicated by the blue box).

3 Magnetic Coil LF Antenna Description

Depicted below is the position of the magnetic coil LF antenna used for the detection of a 125 kHz signal to wake the key. The magnetic coil is located on the bottom side of the PCB and only used as part of the low frequency 125 kHz detector circuit. Hence no antenna radiation patten will be provided.
