Subject: Additional Information Request

Message:

Good Afternoon,

ACME has decided to change the name of the satellite on the experimental license application from TRSI4 to TRSI2 per NOAA's CRSRA. Updated exhibits are attached to reflect this change.

Signed and updated ODAR and Cost Recovery are attached.

The LTAN is still TBD. Placement as well as the timing of the launch are subject to the requirements of the launch provider and are still to be determined. ACME will promptly notify the Commission when these determinations are made.

Using SpaceCap v9, there was only one fatal error regarding A.3.a and was unable to update database on this matter. The owner, operator, and Administration are as follows:

Owner and operator of TRSI4 satellite network:
ACME AtronOmatic, LLC, DBA MyRadar
111 W Jefferson Street #200 Orlando FL 32801

Administration: USA

Can the Commission assist with this addition to A.3.a? There were no additional fatal errors.

Format updates have been made in the NTIA form and satellite receive information has been added.

Very Respectfully,
ACME
