

Awwatch, Inc. FreeSpace Loss Calculator				Building is 90' wide at narrowest area, 100 feet on either side results in a 290' diameter area		
				-140 dBm at 100 feet from the building to meet NTIA regulations	At 158' pattern from emitting antenna is at the required level with 42' buffer either side	
GPS Carrier Frequency (MHz)	Transmitted Power dBm	Range in Feet	Free Space loss with Isotropic Antennas	Effective Radiated Power dBm @ Range	Effective Radiated Power (dBW) @ Range	Effective Radiated Power (W)
