Directional Antenna Information

SRI International's "The Dish" Antenna Facility

Diameter: 60 ft F/D: 0.4 K (Beam Width Factor): 66.96 (Edge Illumination = -10dB)

Beam width between the first nulls is: 2.399deg Beam width of the half power points is: 1.2deg Efficiency: 55% Gain of the antenna: 42.282dB Subtended angle of the feed is: 128.022deg

United States Naval Academy Satellite Lab

Diameter: 39 ft F/D: 0.35 K (Beam Width Factor): 66.96 (Edge Illumination = -10dB)

Beam width between the first nulls is: 3.691deg Beam width of the half power points is: 1.846deg Efficiency: 55% Gain of the antenna: 38.54dB Subtended angle of the feed is: 142.151deg

4' Reflector for use in mobile ground station configuration

Diameter: 4 ft F/D: 0.375 K (Beam Width Factor): 66.96 (Edge Illumination = -10dB)

Beam width between the first nulls is: 35.989deg Beam width of the half power points is: 17.994deg Efficiency: 55% Gain of the antenna: 18.76dB Subtended angle of the feed is: 134.76deg
