

Aerotec is an Engineering and Flight Test facility with the goal of certification of new or modified aircraft. The reason for this experimental license is to install a GPS repeater in our main hangar to facilitate aircraft systems testing while still in the hangar.

The unit to be installed is GPS Networking Part number L1/L2GHNRRKIT. According to specs, the unit has a range of 100ft with line of site.

This retransmitter is not experimental but still requires an experimental license for use.
