

REQUEST FOR EXPEDITED TREATMENT

As discussed in the accompanying “Narrative Statement,” Amazon Robotics seeks to conduct experimental tests of a prototype proximity sensing system operating in the 433 MHz band designed to enhance the safety of the operations at its fulfillment centers outside the United States.

Grant of the experimental authority by **October 1, 2015**, is requested to allow Amazon Robotics to complete initial testing, analyze and compile the results, and prepare reports of its findings in time to make presentations at a key meeting to be held on October 15 with company officers and personnel who will assess the performance and functionality of the equipment and provide needed feedback to make improvements and design changes to the equipment for further testing during the remainder of the term of the experimental license. Amazon Robotics also anticipates that company personnel may request a live demonstration of the equipment on or about the time of that meeting. Accordingly, Amazon Robotics respectfully requests expedited treatment of its application so that it may commence the proposed tests on or before October 1, 2015.

Amazon Robotics submits that expedited processing of its application is in the public interest, convenience, and necessity, as it will permit the company to advance both the communications technology and the application technology needed to enhance the safety of the operations at its fulfillment centers outside the United States.
