Re: American Tower Indoor DAS LLC, Application for Experimental License

To Whom It May Concern:

American Tower Indoor DAS LLC (“ATID”), by counsel, hereby requests that the technical information contained in its application for an experimental license filed contemporaneously with this request be held in confidence and not made available for public inspection pursuant to Section 0.459 of the Commission’s rules. *See* 47 C.F.R. § 0.459. As detailed herein, confidential treatment of this document is appropriate under Exemption 4 of the Freedom of Information Act (“FOIA”), which applies to information constituting “trade secrets and commercial ... information” that “would not customarily be released to the public.” *See* 5 U.S.C. § 552(b)(4); 47 C.F.R. § 0.457(d).

In support of its request for confidential treatment, ATID provides the following information, as required under Section 0.459(b) of the Commission’s Rules –

1. *Specific Information for Which Confidential Treatment is Sought - § 0.459(b)(1):* ATID seeks confidential treatment for its entire application submitted contemporaneously with this request, including both the technical data and narrative attachment. The characteristics and technical parameters contained in the application technical data section and the description of the experimental plan contained in the narrative statement are proprietary to ATID, and are subject to a non-disclosure agreement between ATID and Ruckus Wireless, Inc. (“Ruckus”), the manufacturer of the small cell radio access equipment.

2. *Circumstances Giving Rise to the Submission - § 0.459(b)(2):* The proprietary technical data submitted to the FCC is required in connection with ATID’s application for an FCC experimental license under Part 5 of the FCC’s Rules. *See* 47 C.F.R. § 5.1 *et seq.*

3. Degree to Which the Information Is Commercial or Financial, or Contains A Trade Secret or Is Privileged - § 0.459(b)(3): The technical information for which ATID is requesting confidential treatment contains commercially sensitive information “which would customarily be guarded from competitors.” *See, e.g., James A. Kay, Jr.*, 17 FCC Rcd 1834 (2002) (withholding such information from public inspection). This information includes, but is not limited to, detailed information concerning new Ruckus antenna, as well as details of the testing methodology to be employed by ATID. The application therefore reveals substantial information concerning the design features of the antenna and test plan for this antenna. Disclosure of this information to competitors of ATID and Ruckus would be competitively harmful to both companies. Accordingly, public disclosure of the confidential terms of these documents could materially impair their businesses.

4. Degree to Which the Information Concerns a Service That Is Subject to Competition - § 0.459(b)(4): As the Commission is aware, there is substantial competition in the wireless industry among both facilities providers, such as ATID, and equipment manufacturers, such as Ruckus in the emerging field that is the subject of the application. Because new and innovative equipment and services are just now being tested for near-term launch, competition among equipment vendors and service providers is particularly keen at this time, and service providers and equipment manufacturers alike have a strong interest in protecting from disclosure proprietary information concerning their potential future products and service offerings.

5. How Disclosure of the Information Could Result In Substantial Competitive Harm - § 0.459(b)(5): Information about the operating characteristics and performance of the antenna to be utilized in ATID’s experimental program could be misused by both current and potential competitors of both ATID and Ruckus to gain commercially exploitable knowledge, thereby allowing them to reap unfair advantages in formulating their own plans for technical development of competing equipment and/or systems. This is a particularly critical time for a company that is pursuing product development to protect its plans from disclosure to third parties. Release of the details of this experimental program to potential competitors would allow others to benefit from plans and information that both ATID and Ruckus have spent considerable time and money developing, and to adapt their own plans based on this proprietary information.

6. Measures Taken By the Applicant to Prevent Unauthorized Disclosure - § 0.459(b)(6): ATID and Ruckus have agreed to strict limitations on the use and sharing of proprietary information under a non-disclosure agreement between these parties. Information included in the application concerning antenna technical parameters and testing performance goals falls within the category of confidential information under this agreement. In accordance with the terms of this agreement, ATID and Ruckus have limited access to the information solely to those employees, contractors and agents who require knowledge of the tests described in the experimental license application in order to perform their duties and fulfill the companies’ obligations to each other under their contracts. Any other disclosure of law requires prior written consent of the other party.

7. The Information Submitted Is Not Available To The Public and Has Not Previously Been Disclosed To Third Parties, Except For Appropriately Limited Circumstances

LS

- § 0.459(b)(7): No part of the ATID experimental license application has been publicly disclosed to date. Disclosure has been limited by the parties to employees, counsel, contractors and agents of ATID and Ruckus who have a specific need to review and analyze proprietary technical information relating to the equipment under test and the experimental testing program to be executed under the requested FCC license.

8. ***Period During Which The Submitted Material Should Not Be Available For Public Disclosure - § 0.459(b)(8):*** ATID respectfully requests that the experimental license application be kept confidential indefinitely. At the present time, there is no time horizon within which the technical details provided in the application will become significantly less sensitive, and there is no temporal limitation on the non-disclosure obligations that ATID and Ruckus have made to each other. Accordingly, ATID requests that the Commission maintain confidential treatment of the material submitted at least until it expressly notifies the Commission that confidential treatment is no longer required.

* * * * *

For all of the foregoing reasons, ATID requests that the Commission withhold its experimental license application from public inspection, according it full confidential treatment. In the event that a request for examination of this document is filed, ATID respectfully requests an opportunity to respond and to provide a partially redacted version in lieu of full disclosure.

Respectfully submitted,

By:
