

REQUEST FOR EXPEDITED TREATMENT

As discussed in the accompanying “Narrative Statement,” TransCore is a leading manufacturer of radiofrequency identification (“RFID”) and related equipment and systems in the United States and overseas. It currently is involved in designing, developing and demonstrating devices and applications to be deployed in Intelligent Transportation Systems (“ITS”) and other operations related to vehicle safety, traffic management and other activities.

TransCore was recently asked to conduct a demonstration for a local government entity operating in San Francisco beginning on **August 1, 2013**. The experimentation would yield benefits for the development of DRSC capabilities. As noted in the “Narrative Statement,” TransCore does not propose to market, sell, or lease prototype equipment to end users. Moreover, no fees will be charged to entities evaluating the equipment during this test. After the experimentation ceases, TransCore will recall and recover all unauthorized devices.

Accordingly, TransCore respectfully requests expedited treatment of its application so that it may commence the demonstration as requested. It is unable to re-schedule the test, as the representatives attending the demonstration cannot readily participate at another time. In addition, TransCore seeks to provide actual test data at the meetings to be held during the weeks following that demonstration.

TransCore submits that expedited processing of its application is in the public interest, convenience, and necessity, as it will permit TransCore to advance both the communications technology and the application technology needed to further the national agenda of improving the operational safety and efficiency of vehicles on U.S. highways.
