Subject: Additional Information Request

---

Message:

Hi Nimesh,

We have uploaded an additional application narrative document as well as two structural drawings as exhibits to our original application. For the detailed narrative, here is what is included in the document uploaded:

"Anadarko is proposing GPS within their Single Point Anchor Reservoir facility located in the Gulf of Mexico. The re-transmitting antenna is located inside a control room used for testing and experimentation of a Rockwell Allen Bradley GPS module, along with other GPS timing and synchronization tools. This experimentation allows us to ensure equipment will perform optimally while allowing us to continuously enhance and improve GPS clocking applications."

Let us know if you need anything else. Thanks!
