

 **ANDURIL** Flight Test Site Summary and Frequency Request

October 2020

- **Test Site Active Hours:** 0700-2200 Mon-Fri
- **Altitude Block:** SFC-FL4, FL12 via NOTAM
- **Primary Contact:** 949-275-0379, cts-airspace@anduril.com (Test site airspace hotline)
- **Secondary Contact:** Actively monitoring ATC radio traffic when requested by MCB Camp Pendleton (under active contract with USMC to share part of their R2503 airspace - MCICOM M95494-19-C-0012)
- **Frequency Request:** For the purposes of a dedicated frequency (450-470 MHz) for flight termination system (FTS) radios. The FTS is responsible for aircraft power cutoff in the event of unexpected behavior during test. This system is required for operation at military ranges in restricted airspace, but is used at the current test site out of an abundance of caution.
