

Exhibit 1

By this application, Applied Information, Inc. seeks experimental authority to operate certain modular cellular vehicular-to-everything (C-V2X) prototypes for purposes of testing, development, and evaluation. Operations would occur in the vicinity of Springboro, OH.

The proposed testing areas provide a diverse range of topography, flora, seasonal weather, construction and other potential interferences to radio communications. The C-V2X radios will be operated on vehicles and roadside infrastructure throughout the specified area to test, develop, and evaluate C-V2X vehicle communications, transportation infrastructure communications, and chip prototypes in real-world scenarios in anticipation of wider-scale deployments following adoption of final rules for C-V2X.

Under these testing conditions, Applied Information will own the C-V2X equipment, which will be operated by our road-operator test partners. At the end of the testing period, the equipment will either be retrieved, rendered inoperable or labeled in accordance with the Commission's rules should any final rules for C-V2X go into effect during the license period.
