Attachment to Form 442: Response to questions from Aseraphin@fcc.gov

Missing Data (Reference Number: 1795)

Frequency and emissions data have been submitted via the website, but do not appear to have transferred automatically. I get a message at the end of emissions submission, which reads "incorrect confirmation number" even though the number has been correctly entered and I have been allowed to edit frequencies and emissions data.

Note: The frequency and emissions data for Wallops should be identical to the Pt. Mugu information.
The Tillamook, OR antenna has been deleted.

We have previously done frequency coordination with and received approval from the Western Spectrum Manager for the frequencies to be used at Pt. Mugu NAS (previously Edwards AFB and Manassas, VA under callsign KE2XGD).

We have also done coordination for Manassas and Wallops Island, VA through our program management at NASA ERAST.

For the Blossom Point, MD antennas we have coordinated through our DARPA program management and the Eastern Spectrum Manager.
