

Exhibit 1

In connection with the renewal of the Station WE2XBV license, the following is noted:

- A Modification Application is being simultaneously filed under File No. 0112-EX-CM-2018 to correct the geographic coordinates for the license, confirm the only government contract associated with the license (U.S. Navy; N00019-09-C-0019), and to update the “Stop Buzzer” information.
- Although the original license application explained that the operations under the license would occur in an anechoic chamber with the door *open*, operations have been and continue to be conducted in a fully shielded anechoic chamber with the door *closed*. If and when operations occur in the future with the chamber door open, or outside the chamber, BAE Systems will pursue the various coordination and consent conditions specified on the license.
