Subject: 0477-EX-CR-2020 pre-coordination data request

Message:

Ms. Nguyen:

The Commission requested AFTRCC coordination for pending 0477-EX-CR-2020.

However, the pending modification application under 0477-EX-CR-2020 removed all AFTRCC frequencies from the license.

Accordingly – as confirmed by the AFTRCC coordinators in the emails below, the license – as it is being modified – will not contain any AFTRCC frequencies upon grant of the application.

Please see below.

Accordingly, BAE Systems assumes that AFTRCC coordination will not be required.

Please contact undersigned counsel if the Commission has any questions regarding this matter.

Best regards,

Jeff Rummel
Attorney for BAE Systems

Mr. Rummel,
There are no frequencies on your FCC application requiring AFTRCC coordination.

Experimental Station WD2XSG

Jeff,

According to the application and exhibit, you reduced the ranges in the existing license to specific frequencies that are not within the AFTRCC coordinated bands. If that is correct, I speculate that the FCC notification requiring AFTRCC coordination is triggered by the frequency ranges on the current license, not the modified frequencies on the renewal version. That may not be the case, but seems likely to me.

Dan
