This response is sent to you on behalf of Bigelow Aerospace with respect to the questions posed in your November 6, 2007 email (reproduced below) concerning the above-referenced application. For your convenience the questions are also provided in the body of this message.

Bigelow Aerospace was asked to provide the following information:

Q: [What is the] ERP?

Response: The ERP should be 14 picoWatts (~-78 dBm), based on the value in the application for input power received at the antenna (0.2 picoWatts). This meets the NTIA requirement of -144.46 dBm at 30 meters.

Q: Please confirm the frequency band 1565.4 - 1585.4 MHz with the bandwidth 24 MHz. The bandwidth that you provided is exceeding the frequency band that you applied. If you'd like to test GPS - L1 with frequency 1575.42 MHz with bandwidth 24 MHz, please send me an email to confirm changing the information on your application.

Response: The correct bandwidth is 20 MHz. Accordingly, the emission designator specified should be 20M0W7D rather than what was provided in the original application.

Please let me know if you need any further information.

Thank you,
David
