The purpose of this modification is to expand the licensed area of operation in support of our aircraft flight test and certification program. The Boeing Company is currently conducting flight testing and certifications for multiple aircraft programs. In order to allow for simultaneous testing operations it is necessary to expand the licensed area of operation to include nationwide operations, as well as international airspace.

All other terms and conditions of the license will remain unchanged, including the authorized frequency power and emissions. The testing will only involve use of standard INMARSAT aeronautical service provided through an INMARSAT authorized service provider. In addition, there will be no change in satellites as listed in the previous authorization, which include satellites 3F3, 3F4, 4F2, and 4F3.
