

The goal of this experiment is to support the Vehicle Infrastructure Initiative (VII) program for the US Department of Transportation (US DOT), under contract number DTFH61-04-D-00003.

This contract covers the design and construction of a Proof of Concept (POC) for the VII system, the goal of which is to prove out the communications infrastructure, including the DSRC link between the vehicles and the roadside, before a national deployment of the VII system is undertaken.
