

OPERATIONAL TIMELINE:

The requested duration for operation of this experimental station is May 1st, 2010 through Sept 1st, 2010.

Although the absolute minimum time table for operation of this proposed propagation beacon at 70.005MHz is mid-June through mid-July during peak annual Es skip occurrence, the applicant is requesting a larger time window to allow for equipment adjustments and optimizations.

The applicant is willing and can alter the operational schedule if there is future conflict with other radio services during the requested time period.
