Message:

Sir,

This correspondence would also apply to Denial Letters, Reference Nos. 27147, 27148, 27149 and 27150 issued 9 March 2015.

These license applications were submitted in support of Department of Homeland Security requested/sponsored testing of the C Speed LightWave Radar as a potential sensor for detecting low flying aircraft and small boats along the US border - in this case, along the southern California coastline. Said testing is scheduled for later this year.

Could you please provide me with the specific points of NTIA objection, as well as a point of contact with whom we could discuss the issues. We would like to better understand the problem and work for its resolution. Thanks.
