Subject: Additional Information Request

---

Message:

I have updated and made corrections to the application. And below is a further description of the experiment:

We are testing our downlink solution that we just integrated into helicopters. We will be testing video downlink from the helicopter to a temporary receive site in order to prove everything is working. The video is for public safety (Law Enforcement).

We will be flying during the day and evening 1-3 time a day in Late April. The flights will be 30-45mins each and will be 15-20KMs from the Decatur Airport. The temporary receiver will be set up at the airport (LUD).

We will be testing and commissioning the downlink that we installed on the customer's helicopter.

Thank you for your expeditious processing of this application.
