MEMORANDUM FOR: Executive Secretary, IRAC

FROM: William Gamble *W. Gamble*
Deputy Associate Administrator
Office of Spectrum Management

SUBJECT: Extension For 404-MHz Wind Profilers
(October 1, 1995 through September 30, 1996)

NTIA, after consultation with Federal Government agencies, concurs with the request to allow wind profiler experimental operations to continue in the frequency band 401.15-406 MHz for the period beginning October 1, 1995, and ending September 30, 1996. This one-year extension is to allow additional time to evaluate the results of previous measurements that could assist in changing the existing operational constraints currently being used by 404-MHz wind profilers (see Attachment). The results of this evaluation will be reviewed at subsequent meetings of the 404-MHz working group, chaired by Gary Patrick/NTIA, and should provide the basis for developing long-term procedures that will allow 404-MHz wind profilers to continue to operate beyond September 30, 1996.
