

## Exhibit 1

INMARSAT-C (formerly referred to as Standard-C) is INMARSAT's new data-only transmission service which operates in a store-and-forward transmission mode in the L-band frequency spectrum. COMSAT General Corporation has procured one mobile unit which will be used in conjunction with its work with the program of development of the INMARSAT-C Coast Earth Station. The terminal will be used to test and validate equipment design and communications software. The terminal will be also used to communicate with other INMARSAT-C developers and with INMARSAT regarding technical issues on the INMARSAT-C program.

In-depth information regarding the INMARSAT-C terminal was furnished to the Frequency Liaison Branch in connection with an experimental license issued to Communications Satellite Corporation for INMARSAT's prototype Standard-C terminal, call sign KS2XAF effective August 12, 1988.
