

Supporting information for 2200 – 2290 Mhz

Frequency use will be in support of 5 Motorcycles covering 8 stages of the Tour of California bike race, along the central California coastline. Each bike will have 1 transmitter attached to the bike to relay television pictures and audio back to a compound area for distribution to a television network. The course begins in Sacramento and continues 1 day at a time until it reaches the end in Thousand Oaks California.
