re: Request for temporary use of certain unoccupied 700 MHz bands in Atlanta, Georgia in support of broadcast operations for the National Football League's Super Bowl LIII

Whereas applicant has certain LTTS, BAS and private wireless licenses for this purpose, the spectrum demands at the annual NFL Super Bowl event, along with recent restrictions in previously utilized spectrum, are necessitating use of additional spectrum to provide for our clients' needs in order to bring the full experience of the event to consumers.

According to ULS and Site/Market/Frequency Query databases as of 03 December 2018, there are no licensees of the requested 700 MHz bands within a 25km radius of the operational area. Given this, along with the low ERP, ground level operations and the attenuating characteristics of the surrounding and adjacent structures, there should be no interference to any incumbents or licensees during the requested time frame.

Respectfully submitted,

H Cohen
