STA Application 0344-EX-STA-2020
Frequency Coordination Explanation for 700MHz Request
April 08 - 09, 2020

This application proposes the use of three 700MHz guard bands (757-758 MHz, 775-776 MHz, 787-788 MHz) for wireless microphone equipment in support of the televised broadcast and internet streamed coverage of the MLB Draft Lottery and related events/activities inside the MLB studio complex in Secaucus, NJ.

Applicant is a television microwave and communications production company which provides video, audio and communications equipment and services for broadcast, satellite broadcast and cablecast of sporting and other events. Applicant has certain LTTS, BAS and private wireless licenses for this purpose. However, the extensive Part 74(H) spectrum utilization existing in the studio complex and the large number of active DTV stations in the New York market necessitates making coordinated, temporary use of additional spectrum in the 700MHz band.

A ULS search for licensees of the aforementioned guard bands 75km about N40°47'05", W74°04'17" (40 Hartz Way, Secaucus, NJ) resulted in no matches found. Further, actual time span RF scans at the location confirmed there was no activity in the three bands.

To mitigate potential interference to adjacent channel licensees, occupied channel bandwidth will not exceed requested band limits.
