Since 1925, the Federation of National Amateur Radio Societies  
Representing the Interests of Two-Way Amateur Radio Communication

CP 9

23 November 2015

**Alex Saunders KJ6RQH**

**Alex**

Thank you for your coordination request which I have discussed with the advisory panel.

We have coordinated the following frequencies

Uplink / downlink 437,505 MHz

You have not indicated a launch date, please advise us of final date for the launch when this becomes available and also what other satellites using amateur frequencies are on the same launch vehicle.

Please note that all frequencies in the amateur satellite service are shared frequencies. We have attempted to make the best possible selection for your project.

You are also referred to the ITU requirements for satellites. We have prepared an easy reference document which is available on [www.iaru.org/satellite](http://www.iaru.org/satellite), it will assist you to comply with the ITU requirements for Amateur satellites. Please advise us of the API number once available.

Please also read the “controlling satellites” document available on [www.iaru.org/satellite](http://www.iaru.org/satellite)

IARU has coordinated a frequency in a band allocated to the amateur satellite service, based on the information that has been provided to it. Your licensing administration is the only party who can properly authorize your project to use a band allocated to the amateur satellite service. The IARU frequency coordination set out above is intended to maintain minimum interference in the bands allocated to the amateur satellite service. It should not be taken as any agreement or consent by IARU to allow services other than the amateur satellite services to use this band, nor as any warranty that the frequencies will be free from interference.

Best wishes for a successful project.

Please keep us informed of developments and progress.
