

This exhibit addresses the Directional Antenna information.
Submitted by Capella Space Corp.
Application File # 1152-EX-ST-2020

The ground station will follow the spacecraft as the spacecraft traverses the sky. The ground station will only transmit when the spacecraft is 10 degrees above the horizon. Orientation of the ground station antenna in the horizontal plane (degrees from True North) and orientation in the vertical plane (degrees from horizontal) will vary continuously as the ground station transmits.
