

Modification of Frequency Band Request in File Number 0229-EX-ML-2015

Modify 2300-2400 MHz to 2360-2400 Mhz.

Carnegie Mellon University has completed discussions with SiriusXM Satellite Radio and has agreed to limit the 2300 Mhz band request to those frequencies above 2360 Mhz. This will eliminate any possibility of the proposed testing causing harmful interference to the SiriusXM system. SiriusXM has agreed to this change.

The frequencies in the application have been modified to correspond with this change.
