Cisco Systems has developed several products that interface with GSM/GPRS and CDMA systems. Specifically our packet data gateways (GGSN and PDSN), home agent (HA), charging service gateway (CSG), mobile access router and Cisco mobile exchange solution (CMX).

We have a request to evaluate our products with the listed transmitters on this license. The project is a short term review at this time.

the evaluation will take place in the Cisco radio labs located in RTP to evaluate not only our devices but how they interface with CDMA / GSM base station for our customer.
