

GPS Networking Link Budget Calculator

The following spreadsheet calculates the effective radiated power for a GPS Networking reradiating system as well as the effective signal power at given range in dBm. Enter the components for the strongest repeating path in your system into the section with the red border. NTIA regulations require that the repeated signal be weaker than -140 dBm when measured 100 FT outside of the reradiated structure. Please feel free to reach out to GPS Networking if you need assistance.

Receive Ant Gain	Ant Cable Insertion Loss	Repeater Amp Gain	Repeater Ant Gain Best Case	Building Length (Feet)	Signal Power @ End of Building	Signal Power @ 100' Outside of Building In dBm
38	-2.1	25	-4	35	-130.07	-141.7996081
GPS Carrier Frequency MHz	1575		Total System Gain	Range in Miles	Total Signal Power @ Range in Watts	
			56.9	0.01	98.3E-18	
Avg Receive Power L1 dBm North America	-130			Range in Meters	Radiated Power dBm	
				10.91	-73.1	
Free Space loss with Isotropic Antennas	-56.97			Range in Kilometers	Transmitted Power (W)	
				0.01	24.5E-12
