Message:

The 3.3GHz~4.9GHz, and 5.25~5.925GHz band will be used for 5G active antenna test, which is addressed in the 3GPP document 38-141-2 (mainly in chapter 6 and 7, 1-O is our case). Basically, we are radiating high power narrow beam modulated 5G signal to a probe to do Tx test, or use probe to radiate modulated 5G signal to DUT to do Rx test.
