Subject: Additional Information Request

Message:

Hello,

•Frequency bandwidth of operation: 5150-5875 Mhz per SAE J3105-1. WiFi channels used in this band will be fixed per customer installation (multiple vehicles per customer) but from customer to customer they may choose different WiFi channels.

•Need for 75 devices: Our customer will be testing this hardware on transit buses throughout USA for the next three years. Hence, the experimental license will need to cover this theoretical maximum demand. We cannot say for certain that we will be using this many in the field.

Thanks,
Dilip Ramachandran.
