Subject: Additional Information Request

---

Message:

Hello,

As far radius of operation is concerned, we estimate it to be 30 miles as it would cover city limits within which each transit authority is supposed to operate. I have asked FAA to update this on their pre-coordination document and I have also added that information in the exhibit for each antenna location.

I have also made separate antenna entries for the different states in which we plan to operate at the moment per your request with latitudes and longitudes. Just curious, if we were to add more locations in the future- will we be able to use this same application and add those locations or would we have to start a new application?

Please let us know if anything else is needed.

Thanks,  
Dilip Ramachandran.
