Subject: Additional Information Request

Message:

File No. 0259-EX-CM-2019 (WK2XCW)

Ref. 50941

In reply to the above-referenced inquiry, please note the following:

- The ground-based radar that is the subject of this experimental license is part of a larger test and evaluation activity associated with various other technology being developed and integrated to counter the proliferation of small, unmanned aircraft systems (UASs) under the DARPA Mobile Force Protection (MFP) program. The radar is only one technology necessary to develop and demonstrate the feasibility of a prototype system being developed for the DARPA Mobile Force Protection (MFP) contract.
- This experimental license is not intended, nor will it be used, to be used to market and sell the radar equipment. The radar is part of the overall MFP system and the experimental license is required to test the subject radar in a realistic (open air) environment to validate the performance of the system with respect to probability of detection, minimization of false and nuisance tracks, and radar reliability.

Should you have any additional questions, please feel free to contact undersigned counsel.

Best regards,

Jeff Rummel
Attorney for Dynetics, Inc.
