Annual Report - KA2XZE

Activity for 1994 only included local testing of equipment in Houston as negotiations have been proceeding with NASCAR for several months.

Forecast for 1995-1996 - It appears within three weeks we should have final negotiations underway or completed with NASCAR to assist with the unique problem of coordinating the 40-50,000 people that are on race grounds several days prior to the events. The large crowds of people have no real communications, and the service could greatly benefit the public by providing an information station at many of the larger races.

The station will perform numerous benefits for the people because we may dedicate the full time to working with the crowd at each particular event that we cover. This will allow new updates, safety messages, entertainment, and directions for arrival and departure specifically designed for the special event.

We expect to be ready for operation by the middle of May 1995 including all preparation that is expected to be required from NASCAR.

Edwin L. Lyda
