Necessary Bandwidth Calculation

The necessary bandwidth was determined using the equation in Annex J of the NTIA Manual¹ for FM-pulsed radars (see Equation 1).

$$B_n = B(-20 \text{ dB}) = \frac{1.79}{\sqrt{t_r \cdot t}} + 2B_c \quad (1)$$

where

- B_n = necessary bandwidth, MHz
- t_r = pulse rise time, μs
- t = pulse width, μs
- B_c = frequency deviation (chirp) bandwidth, MHz

The ELTA NA EL/M-2026B emission characteristics are given in Table 1. Applying these parameters to Equation 1, results in a maximum necessary bandwidth of 21.3 MHz.

Table 1 Emission Characteristics

Pulse width	1.2	μs
Pulse rise/fall time	10	ns
Maximum frequency deviation	2.5	MHz
