Subject: Additional Information Request

---

Message:

Hello Sir/Madam,

This is a response to Correspondence Reference Number 61666.

When I said "Hence, Iridium and the RTCA/DO-262E, Appendix D, standards do allow EMS Technologies to operate at 6.4dBW", the Appendix D I was referring to is a section of the RTCA/DO-262E document, which deals with the Minimum Operational Performance Standards for Avionics Supporting Next Generation Satellite Systems (NGSS) using the Iridium Satellite constellation.

I am sending the updated version of the "Detailed Exhibit" document with Title "Detailed Exhibit May 6 2021" which includes one more Appendix and shows the maximum EIRP as specified by Table D-7, in Appendix D of the the RTCA/DO-262E document.

Thank you,

Yohannes
