---

Message:

This system is part of a planned demonstration for the US Army. I need to understand if there is any path towards getting it approved. For example, should I reapply as a not COTS system? Do we need to define an exact flight path?

The lead engineer from our parent company made this statement: "The full BW of the system is 500MHz between 24.0GHz and 24.5GHz. Nevertheless, we intend to use only ~50MHz of the spectrum in October demo, so in case the full BW exceeds the regulation limitations let us know and we'll tune our system accordingly."

Please let me know what can be done.
