## Elbit Systems of America Request for FCC Experimental License

Form 442 File Number: 0211-EX-CN-2017 Form 442 Confirmation Number: EL645154

31 March 2017

## **Necessary Bandwidth Calculation**

The necessary bandwidth was determined using the equation in Annex J of the NTIA Manual<sup>1</sup> for FM-pulsed radars (see Equation 1).

$$B_n = B(-20 dB) = \frac{1.79}{\sqrt{t_r \cdot t}} + 2B_c \tag{1}$$

where

B<sub>n</sub> = necessary bandwidth, MHz

t<sub>r</sub> = pulse rise time, μs t = pulse width, μs

B<sub>c</sub> = frequency deviation (chirp) bandwidth, MHz

The Elbit FOPEN radar emission characteristics are given in Table 1. Applying these parameters to Equation 1, results in a maximum necessary bandwidth of 152.83 MHz.

**Table 1 Emission Characteristics** 

Pulse width	0.4-2	μs
Pulse rise/fall time	1	μs
Maximum frequency deviation	150	MHz

<sup>&</sup>lt;sup>1</sup> Manual of Regulations and Procedures for Federal Radio Frequency Management, Washington, DC: US Department of Commerce, National Telecommunications and Information Administration, 2008 (revision May 2011).
