Message:

For emission designators associated with the three emission modalities, refer to correspondence reference number 54983. Regarding ERP, characterizations of the radiated emissions for the 2.45GHz antennas are presented in the narrative statement provided with this application. For the 50kHz near-field antennas, preliminary Part 18 testing demonstrated a maximum field strengths of 112.5dBuV/m at a distance of 3m and 79.6dBuV/m at 10m. ERP was not directly measured for this antenna.
