RE: Ericsson STA Application 0379-EX-ST-2007

Dear Mr. Keltz:

Please be advised that Ericsson wishes to modify the above referenced STA Application to: 1) change the start date of experimental operations from October 15, 2007 to October 1, 2007; and 2) attach the following conditions to its experimental operations:

- Ericsson shall establish a 24/7 stop buzzer hotline so that entities experiencing interference can have transmissions immediately stopped. The stop buzzer will be activated through the Cincinnati Bell Wireless 24-hour Network Operations Center (NOC). The NOC contact number is (513) 566-3100.
- Ericsson shall provide a test plan schedule that shows the location of testing by day to the Department of Justice and the Department of Homeland Security.
- Ericsson shall provide its test plan schedule at least 4 days in advance to:
Carolyn.j.thomas@usdoj.gov
Julio.A.LaGuardia@usdoj.gov
Ross.merlin@dhs.gov
David.Campbell2@dhs.gov
Pat.Dibari@dhs.gov
- Ericsson shall directly coordinate its experimental operations with the local BAS frequency coordinator and with potentially affected BAS licensees.

As to the last condition, Ericsson is already in communication with the BAS licensee with operations adjacent to 2110MHz. We are working cooperatively to evaluate and mitigate any interference issues. Ericsson is committed to ensuring that its experimental operations do not cause harmful interference to either BAS or any government users. If you have any questions, please contact me.

Sincerely,

Allison M. Ellis, Esq.
Director, Regulatory Policy
