

Ericsson
Experimental License Application File No. 0069-EX-CM-2016
Filing Date: October 24, 2016

Ericsson is filing to request two updates to our existing license, call sign WH2XUM.

First, we initially filed this license seeking authorization for indoor-only operation. We now seek authorization for outdoor operation as well, so we can conduct certain demos and proof of concepts outdoors. The operation would all occur on the Ericsson campus and at the existing power levels.

Second, we notified the FCC that the Ericsson facility would be moving in our initial filing. The move has been completed, and we have learned that the lab is located in a different building than we had believed it would be in when we filed the initial application. (It is in the next building, so a change of only about 300 feet.) We have updated the location information in Form 442.
