Experimentation Description

Ericsson is requesting a renewal/extension of its recently expired STA Grant (call sign: WQ9XFA) for continued testing of 5G & 4G use cases.

At Ericsson D-15 Labs we invite collaboration between our partners and ecosystem companies to help you achieve your innovation potential through our 5G platform. Join us at our state-of-the-art campus in the center of Silicon Valley, where you can develop and validate compelling use-cases – leveraging exceptional Cloud Edge support, Core Network, and AI-based Management & Orchestration to create viable end-to-end solutions that enhance service offerings and unlock new revenue streams.

One of the key performance indicators is the latency and throughput promised by 5G technologies. And at D15 we strive to bring together the next generation Network technologies like virtualization and cloudification in Radio and Core networks. This in-turn helps us to build more cutting edge products for niche ecosystems namely in enterprise or gaming or entertainment specific use-cases.
