

EXHIBIT A

Station KF2XHE

General Motors Research Corporation, the Corporate licensee for General Motors Corporation is requesting the renewal of experimental radio license KF2XHE for use at the GM Proving Ground Site in Milford, Michigan. The experimentation conducted consists of installing mobile radio transmitters and antennas on the vehicle, exercising the electrical/electronic systems on the vehicle and simultaneously transmitting in the mobile radio frequency bands while monitoring vehicle performance. The vehicle's performance is evaluated to determine if hardening of the vehicle's electrical/electronic systems is required.

At the present time the location indicated testing is performed sequentially on all frequencies and totals approximately 3 hours/month per frequency.
