

EXHIBIT A

Station KC2XBX

General Motors Research Corporation, the Corporate licensee for General Motors Corporation is requesting the renewal of experimental radio license KC2XBX for use at the GM Proving Ground site in Milford, Michigan. The experiments consist of installing radio transmitters and antennas on marine vehicles and monitoring electrical subsystem performance during RF transmissions. The performance of the vehicle is evaluated to determine if EMC hardening of the vehicles electronic subsystems is required.

Testing is performed sequentially on all frequencies and totals approximately 3 hours/month per frequency.
