

In response to email correspondence dated March 4, 2002 from Mr. Anthony Serafini, Reference No. 1760, we are submitting this progress report as an electronic attachment to our renewal application.

Specifically, you asked for the number of units used during testing nationwide and at Kokomo and Warren.

The experimental licensee, General Motors Research Corporation (“GMRC”), holds experimental licenses on behalf of General Motors Corporation. GMRC uses the subject license to test electromagnetic compatibility between customer radios on motor vehicles and electronic equipment. The license is also used for testing FM antenna patterns and remote keyless entry into vehicles. The number of units used during testing is 1-2, with a maximum of two at any time.
