Message:

Globecomm Systems, Inc. (Globecomm), hereby supplements its pending request for renewal of experimental license WA2XQL, File No. 0288-EX-PL-2001 (Ref. No. 1607). Globecomm submits this experimental license should be renewed for nationwide status. This license was initially granted to allow Globecomm the ability to use Inmarsat-B Land Mobile Earth Stations to provide new and innovative applications for its customers, including the ability to provide high-speed satellite Internet delivery services in areas where such methods of access may not be available.

Nationwide authority has allowed Globecomm the ability to ensure network optimization, configuration, and the ability to improve upon the impact of satellite delays of various protocols, including TCP/IP and other Internet-based protocol technology. Because Globecomm is testing and marketing this revolutionary service across the country, nationwide authority allows it to conserve limited resources. Further, Globecomm will be able to demonstrate its service to potential customers directly at their facilities, rather than require these customers to visit Globecomm's own headquarters or some other limited geographic facility. Such a flexible approach allows for instant feedback from various geographic locations and also allows Globecomm to continue to adapt its network to the rapidly changing needs of its potential client base. Therefore, a renewal of the nationwide authority is warranted.
