Subject: 0516-EX-ST-2020 pre-coordination data request

---

Message:

This request is in support of the US Navy's effort to develop the capability to drop sonobuoys from an unmanned aerial system (UAS). As such, General Atomics is testing this capability with one of its own UAS, using internal research and development funding. This effort is not directly related to any government contract so there is no contract number. Point of contact is Arne Anderson at US Naval Air Systems Command, phone number 301-757-3694.
